Computer Science 101: Introduction to Artificial Intelligence

Lecture 1: Foundations and History
Professor: Dr. Alan Turing
Semester: Fall 2026

Overview:
Artificial Intelligence (AI) is the intelligence of machines or software, as opposed to the intelligence of h

Key Subfields of AI:
1. Machine Learning: Algorithms that learn from data.
2. Computer Vision: Processing and analyzing visual information.
3. Natural Language Processing: Understanding human languages.
4. Robotics: Physical agents interacting with the world.

Summary:
AI continues to transform modern science, engineering, and education.
